

CERTIFIED BEDDING

Certified Contact Bedding Processed
from Virgin Wood Fiber

- The processing equipment will be purged and selected raw material will be introduced in the system.
- The material will be packaged in lot-coded, certified-stamped bags. The lot will be identified by the sample number on the laboratory analysis.
- Samples will be collected at five separate times during the run and combined for a composite sample, which will be sent to an accredited laboratory for analysis.
- The lot will be held in storage pending the results of the analysis and will be released as certified bedding after all specifications are satisfied.
- A copy of the laboratory report corresponding to the lot will accompany all shipments of certified bedding.
